

Radar Vehicle Detector

Specification:

Type	Above Ground Vehicle detector - Radar
Model	DynaTech Radar Ver.3/22
Power Supply	12VDC
Relay 1	(NO) Detection
Relay 2	(NC) Fault
Peek Current	300mA
Operating Temperature	-40deg C ~ +85degC
Transmitter Frequency	24.250 GHz
Output Transmitter Power	10dBm
Max Distance Range	30Mtr
Maximum Detection Angle	-90deg to +90deg

DYNA **Radar Vehicle Detector** is a non-contact detection device for vehicles. It operates in microwave signal to the target to perform high speed real-time processing of the target reflected echo to achieve fast detection. It replaces the traditional loop detector and can accurately detect vehicles.
